

The background of the slide is a deep space scene. In the upper left, the Moon is visible as a grey sphere with craters. In the center, a bright red star with a white core is surrounded by a glowing red nebula. In the lower right, a large portion of the Earth is visible, showing blue oceans, green continents, and white clouds. The sky is filled with numerous small white stars.

Welcome to the 4th RoPACS
meeting
(DP,RS,JK)

RoPACS meeting, MPE Munich
10-11 May 2010

David Pinfield
University of Hertfordshire
